Project

Asset Management(MERN)

- Built a full-stack Asset Management application using MongoDB, Express, React, and Node.js to track company assets across their lifecycle. Implemented JWT authentication, role-based access, and a clean MVC architecture for secure and scalable operations. Developed responsive UI screens for asset CRUD, assignment, and status updates. Added search, filtering, pagination, and Cloudinary file uploads for images/invoices. Optimized backend queries and integrated dashboards to provide real-time asset insights.

Rest-Countries Explorer App

- * Developed a scalable country exploration app using React, enabling users to view detailed information such as capital, region, population, currencies, and languages.
- * Optimized API consumption by handling large datasets and transforming responses into reusable UI-friendly structures.
- * Implemented conditional rendering, error handling, and loading states for better performance and reliability.
- * Followed best practices for component-based architecture and clean code.
